SERVICE LETTER

Equipment Type(s): IN-1502H

Subject: Availability of Test Aids

The Alignment procedure in the IN-1502H Component Maintenance Manual is based on the factory Alignment Procedure, 925-01411-0000. It provides a dust cover with access holes to permit adjustments to be made with the cover in place. This allows conditions within the unit to more closely resemble actual operating conditions. A screen overlay allows proper sizing of the display patterns. These test aids should be obtained to permit field-testing that matches the accuracy of the testing done at the Telephonics factory. The test aids shown in the table below are available for purchase.

Part Number	Former Part Number	Description
T-2809	071-05251-0501	Dust Cover, Test Aid
381-1003-XXX	071-05250-01	Display Size Overlay, Test Aid

Please contact Telephonics for current pricing of these items.
